Peer-to-peer- Allows the sale of surplus power by the consumer/prosumer to another consumer at an agreed tariff, facilitated through a blockchain platform. Applicable in Delhi, Karnataka and Uttar Pradesh.

RTS contribution- Percentage share of electricity generated from rooftop solar in a state's total energy mix.

Peak hour export - To encourage solar energy producers and solar storage operators, a Time-of-day (ToD) solar energy feed-in tariff was introduced for export during peak hours. Applicable in Goa, Tamil Nadu, Tripura and all UT's.

Limit on export units as compared to consumption - Few states have introduced a limit on the electricity generated from the rooftop solar system as compared to the electricity consumed by the consumer during the settlement period. Applicable in states such as Assam, Haryana, Meghalaya, Odisha & Punjab.

Network charges - Grid support charges levied on gross solar generation from rooftop solar system - Only applicable in Tamil Nadu.
